

RotoDraper Pivot Arms:

Are used for adjustable positioning of side leg curtains. May also be used to support and rotate double sided scenery and flats. Standard models permit 360° rotation and travel on and off stage on tracks (not included). Maximum recommended curtain size is 8' wide and 75 pounds.

Models with "-A" include an index plate with spring loaded roller to hold the rotation at 15° increments. To rotate, simply pull on the curtain or pull ropes (optional) attached to each end of the pipe batten.

Releasable spring loaded friction brake is available factory installed to prevent the RotoDraper from drifting along the track. The brake is released by pulling down on a rope (not included) attached to the brake.

Each RotoDraper includes a pair of clamps to hold a curtain pipe (specify 1", 1-1/4" or 1-1/2" pipe size), two #400 clamps to prevent curtain ties from sliding off the ends of pipe and to attach pull ropes, and two safety orange plastic end caps (1" or 1-1/4" size only). Curtain pipes and pull ropes are not included in price of RotoDraper.

A pair of safety end stops (bolts and nuts) is also included with each RotoDraper and must be installed at each end of the track by drilling holes in the sides of the track.

Catalog No.	Description	PRICE
#06	For fixed mounting on a pipe batten. <i>Specify the size of the support pipe batten when ordering.</i> Can also be adapted for fixed mounting directly to building structure or metal strut (Unistrut, Kindorf, etc.)	\$ 120.17
